

Building Science Innovation Center

Individual Assignment / Design Studio IV / Spring 2024

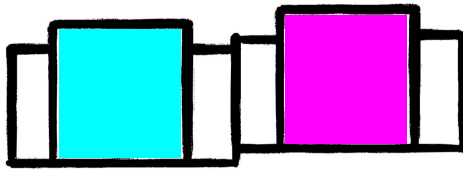

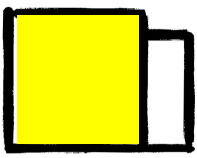

Instructor: John Arnaud

The building science program at App State is outgrowing its current location. So, this project aims to alleviate that within the downtown Boone Area, adjacent to App States western side of campus. This design conforms to the sloped terrain and its footprint accommodates Boone Creek.

PRODUCTION

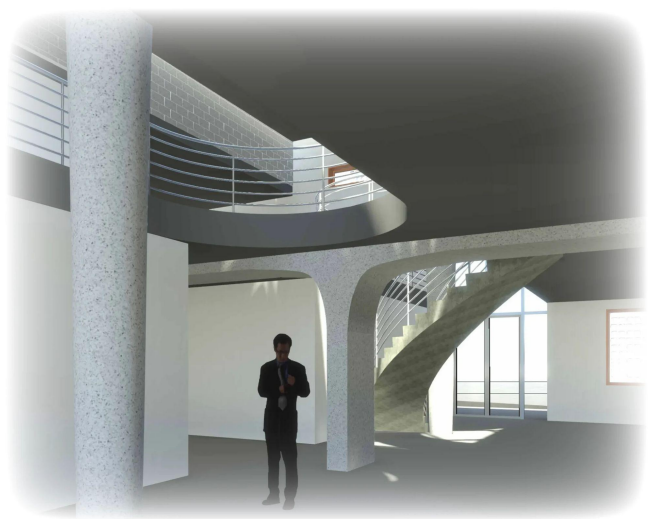

COWORK

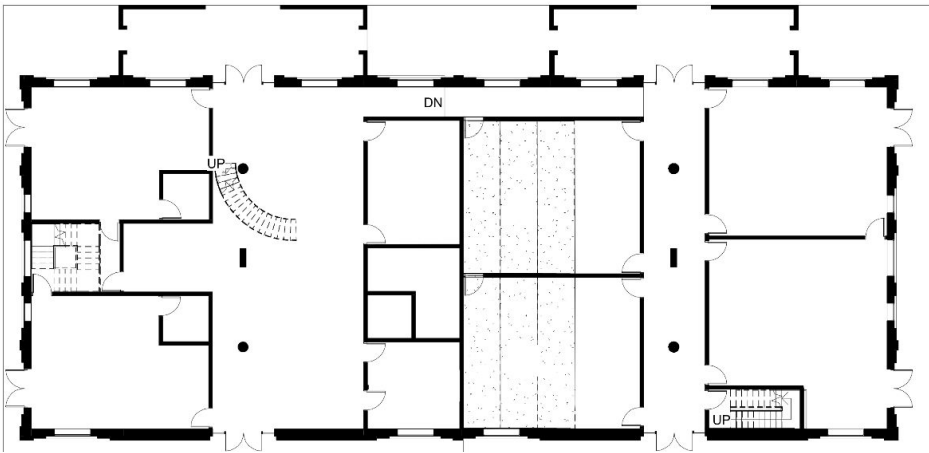

EDUCATION

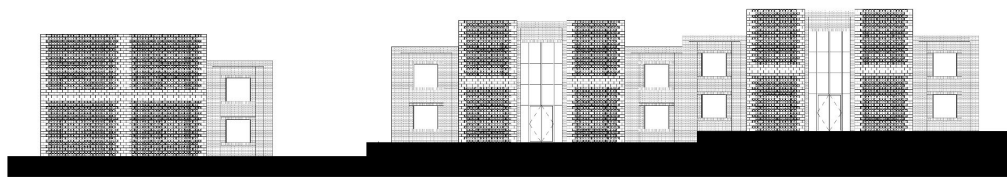

This design fulfills three purposes; small scale panel construction, facilities for lecturing with lab space, and a professional coworking office space.

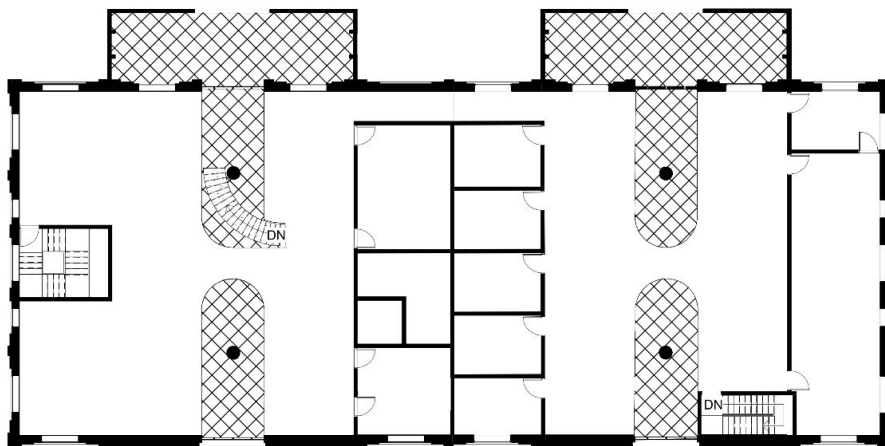

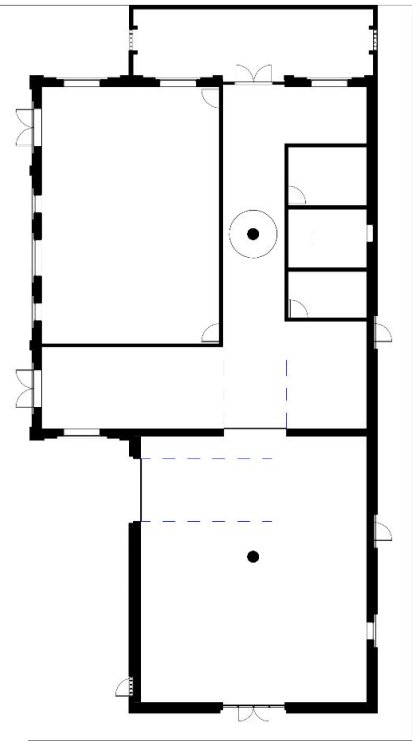

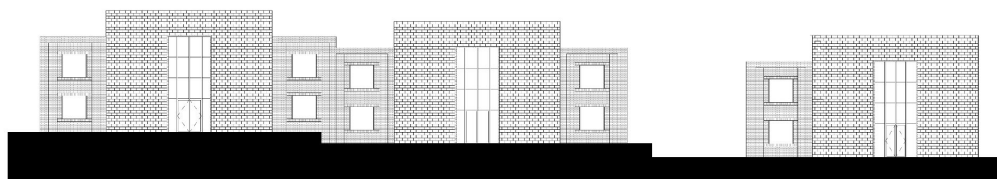

First Floor

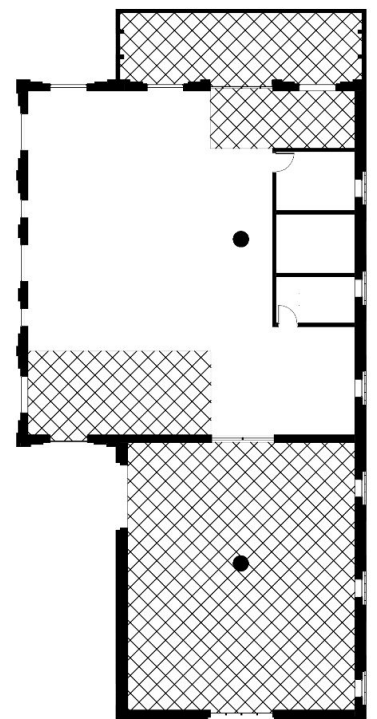

North Elevation

Second Floor

South Elevation

Modeled in AutoCAD and laser cut with foam board, chip board, and cork. Trees are made of multiple gauges of wire. The site model was a class effort and each student had a scale model to fit into it.
